Milestone 1

Part 1 (Properties List) For my initial properties list I decided to include the following:

Item Name (String) This Property will hold the name of each item.

Item Number (Int) This property will contain the item number for each item.

Item Price (Double) This property contains the price of each item.

Item Size (String) This property holds sizing (small, medium, large, etc...).

Number in Stock (Int) This property holds item quantity.

Part 2 (Low Fidelity Prototype) For the initial prototype, I have planned 6 separate pages for the store application:

Home Page

Search Page

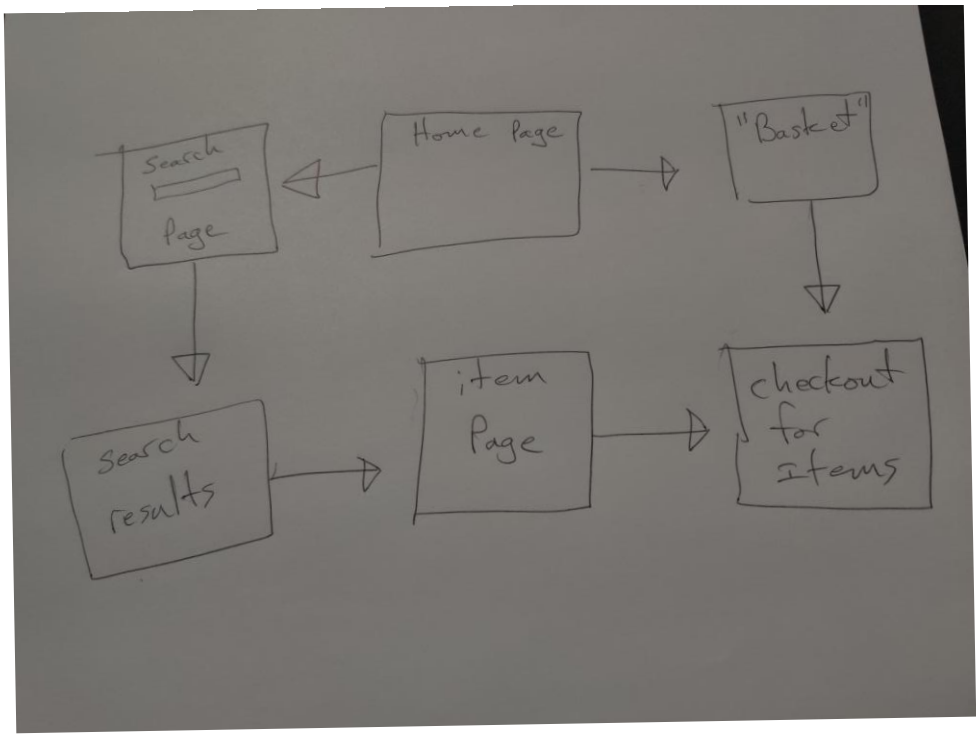
Search Results Page

Item Page

Cart Page

Checkout Page

The Prototype Sketch is hand drawn, and attached below.



Part 2 (High Fidelity Prototype) Is shown in pictures below:
